BRIEF INTRODUCTION

Features of LoftyBot

- FULLY UNDETECTABLE (never send packets or wire with tibia client)
- MULTI OTS (All OTS support 7.3-12) and moreover
- SPELLS/RUNES HEALER
- SPELL CASTER
- AIMBOT
- RUNE MAKER
- HIDER IN PZ
- CROSSHAIR
- ALERTS
- EQUIPER
- LOGOUTS
- MONSTERS ATTACKER
- AUTO WALKER
- TRAINER
- FISHING
- HOTKEYS
- HUD/MACROS
- AUTO ADAPT TO OTS CLIENT (It has build function to adapt new clients automatically)

Loftybot was originally written to support RL tibia. today bot does not support Tibia rl. maybe it will change in the future.

Bot simulates using a mouse and keyboard to perform each function. It behaves like a human. Therefore it is impossible to use the computer while using it.

GENERAL TOPIC AND START BOT

LOGIN

In login tab provide your username and password. You can check remember me to save in file your credentials. If its remembered You do not have to type it again while next runs. Depends where You made account then click on Login or Login New. Always mouse hover over buttons in LoftyBot to get tips of use and help.

CHOOSE CLIENT

In this tab You can choose from all available OTS. Move mouse over buttons too see list of supported OTS.
Here You could find list of supported clients https://loftybot.cc/ots-supports-list/.
Checkout green button to Auto Detect OTS function and red HELP to see how clients config should look like.

DESCRIPTION OF ALL PARTICULAR LOFTYBOT TABS AND FUNCTIONS

MAIN

Pointed HP and Marked Region

These two things must be done (green color) before Loftybot can function. Your OTS client must be running while turning on bot. If bot not pointed HP then click on the button – auto point hp. Right side of client and HP bars can't be covered by other application.

Mark Region

Mark the game screen by dragging the mouse. Where exactly mark shows help image. If you drag or resize tibia window You have to mark it again.

Point HP

Make sure you have run Tibia client and the life bar is not covered. It will auto point - checkout HP and Mana values in bot.

Refresh HP and MP

The speed of performing actions and spells. If you need quick response (many strong monsters, players battle) use a lower values. Small value will more affect on CPU usage.

Battlelist Adapt

Function for finding and setting right position of battlelist. Use this when attacker, alarms, trainers not working.

SPELLS

Healing

Type to input fields spell to heal or hotkey to which the healing spell is assigned. In Below HP field enter a values below which you want the healing work.

Cast Spell

There could be provided values from every hotkey value like F1-F12 and other keys. Look into Settings tab to see what other buttons you can assign as a hotkey.

Use Every seconds

Type to input fields hotkey or spell. It will be executed every inputted interval of time.

RUNES

Take blank from BP

Takes blank runes from this entered BP number. The BPs numbers can be found help screen in settings tab. Blanks are put to the left hand.

Put runes to BP

Put made rune from hand to entered bp number. The BPs numbers can be found help screen in settings tab.

Increase BP

If U check this option numbers of BPs would be increased by inputted time. U can make runes by hours checking this option. BPs must be in sequence for example: 1 empty 2 blanks 3 empty 4 blanks.. Because If entered time passes the value of fields blanks from BP and made runes to BP, will be increased by 1.

Increase BP time

Enter here time which takes to make BP of runes.

Make blanks

Making random 1-4 blank runes at once. If not found blanks in BPs.

Heal self UH/IH healing

Would heal with rune. Uses runes from a BP and uses on character.

Use rune/item on self

It will use rune/any item by set hotkey on character. This function could use any item or custom rune to heal from indicated BP.

Use rune/item on self hotkey

Put here hotkey from F1 to F12.

Drink MP

It will drink MP from BP and scroll BP down to drink from whole BP. This function scrolls BP because the used viale does not disappear. If you use another mana-recovery item on your OTS and it does not disappear after use. In that case better run the Use rune / item on self option.

ALERTS

Someone on battle position

This option is looking for battlelist, if someone appears then alert. You can input one value - 1,2,3. You can input here values greater than 1 If on screen are your summons, friends etc.

MP below alert

This option could be useful for do not become jobless. Example - If U dont have more blank runes You would get high MP value.

If someone on screen choose macro (auto responder)

It would say random line of text from choosen macro. This option works like auto responder. Responds have right interval time between actions. Interval time is set to looks naturally, not like spam bot.

Advanced Hider

This option could be used for making runes/skilling etc. It provides hiding char in protection zone. You need to have loaded 2 marks (walker tab). First mark - place to make actions (runes/skill). Marks are loaded from walker tab. Second mark - place in PZ (depo/house).

ATTACKER

Attack interval

How often the bot should click on the battle to kill monsters. Depends how often monsters appear on screen.

Shoot rune

It shoots rune in monsters. Check this option only If You want killing monsters with runes.

Use spell

It use spell in monsters. Check this option only If You want killing monsters with spells.

Auto Attacker (monsters)

This option would attack (click) on first monster on battlelist.

Aim target

Auto aim rune to target will work if there is a day or use utevo lux. Bot must see read square around target.

Faster option aim target

Move mouse over BP position where is rune to shoot and press SHIFT + F10 button. It will work if there is a day or use utevo lux. Bot must see read square around target.

Rune Aimer (crosshair)

This option will track your mouse. After hotkey pressed it would select chosen rune and throw it to last mouse position. Option could be used as aimer for attack or helper to fast throw magic wall.

WALKER

Load Marks

Add marks to your tibia minimap in sequence. Marks means waypoints where bot should go. Starting from green approved mark. You can add up to 6 marks.

Walker interval

How often the bot should click on the markers.

Auto Walker

Walkers walks only If there are not monsters beside, so run attacker.

Anticheat system

Provides alert when captcha appears on screen Additionaly turn off walker and attacker. Could be used on other OTS on demand. Its enabled on MasterCores OTS only now.

LOOTER

Loot from BP

Number of BP from which loot could be bring. In other words. Where dead monster BP appears in screen. Numbers of BPs You can check on help image (settings tab).

Put loot to BP

Number of BP where loot would be put from dead monster.

Loot from slot 1

This hotkey loot from entered loot BP from 1 slot.

Loot from slot 2

This hotkey loot from entered loot BP from 2 slot. This option is additionally because in first slot could be trash (low value item). You can immediately for example pick up a second, valuable item skipping the first one trash.

EXTRAS

Record positions

Move mouse to water and press left mouse button where You want to fish. You will see added fishing positions in bot tab.

Fishing

You must have fishing rod in arrow slot.

Swap food

Use it If Bot does not eat selected food. Press on the swap food button and then click right button on the desired food. (Just in the middle, above number of food type).

Throwing magic wall

This option will throw magic wall entered the number of SQMs in front of direction where character is rotated. Useful on battles, when someone is running away.

Anti logout

This option will move character in randomized directions, every more or less 10 minutes.

TRAINING

Slime Training

Please mouse move to the position where slimes children reaching to your character and then hit SHIFT + F11 button. In this marked point bot will attack Slimes child. You can use it to skill with other monsters too.

Auto Picker

It picks from ground spears or any other items by time interval.

ROTS Training

Its function only for saiyansreturn.com use for training. Go to the training room and It will fight with red trainers.

EQUIPER

Equip ring

Takes ring from entered BP to ring slot.

Equip necklace

Takes necklace from entered BP to necklace slot.

Equip SSA

It would search for SSA in backpacks and equip it by hotkey

Equip arrow

It would be equiped every 30 seconds. This option will put to arrow slot anything (all bolts, arrows etc).

MACROS

Add text - macros

Add here text to the macros and display them.

Text - macros

Text from macros could be used for auto responder too (alerts tab).

PC SCREENSHOTS* (only in mobile bot)

Make new screenshot

Takes a screenshot of the computer screen on which the bot is running and save image to the web server.

Load images

Loads the photos taken from the server and displays them below. Processing may take a while.

SETTINGS

Help images

Please check it before running functions in bot. If You set your things in client improperly, bot will not function properly. In settings tab are help screen where You have to check how particular OTS client should be arranged. (Where should be BPs, battlelist etc).

Hotkeys

Use this list in input fields like hotkeys. These buttons could work like F1-F12. Example - type "G" in input field hotkey for Cast spell and run function. Hotkey for this function is SHIFT + g. In the same example if you type as hotkey "BS" hotkey for this function is backspace.

Reset PC

This option resets the assigned computer to the bot. After resetting, the next run of the bot will be done on a different computer and the bot will be automatically assigned to it.

TIPS AND TRICKS

Items, Food types and runes declared to use in bot

You could find these things images in bot folder img/items|foods|runes etc. These images could be swapped.

https://lofty-tibiabot.com/Thread-Adding-custom-foods-to-eat This method shows how to make screenshot and then save small cropped .bmp image to bot folder swapping existing one. That's mean you could use any custom item.

POSSIBLE PROBLEMS

Virus in program is often seen problem with antiviruses

Encryption engineering used in programs prevents cracking them. Encryption is often used by hackers to hide their malucious code and AV thinks its virus but not even seen the code behind.
Anyway ther is function used in LoftyBot which one uses Microsoft library to know if ctrl key was pressed for example for: fishing or mwall thrower, that can make false alert especially.

Not Pointed HP

Make sure your OTS client is running. Your right side of OTS client and HP bar is not covered. Check if You choose right OTS from Choose OTS tab.

Still - I don't see Client and HP bar

Please update video card drivers. How to update by device manager. Press Logo_Windows+R button on keyboard. Type devmgmt.msc and click OK. Go to drivers card, click on your graphic card – right mouse button – update driver. You can of course download newest drivers to your graphic card from the manufacturer website.

Bot is not able to run

Disable antivirus and firewall. Look if bot is not in quarantanne. add Loftybot to exceptions in Your antivirus. If not help uinstall antivirus

You still can’t set up bot and need help?

Download this program – I will connect with You and see Your screen
https://www.teamviewer.com/en/download/windows/ Send me PM with ID and password

the bot does not hit runes or does not detect things

Bot does not hit runes on the character

Mark tibia region again
